

● Seller sets price p and threshold level τ

$l=0$

● Buyer picks method given valuation x_i

Don't buy

Buyer payoff: $0 - l \kappa_i$
Seller payoff: $0 - c$

Buy

Buyer payoff: $x_i - p - l \kappa_i$
Seller payoff: $0 - c$

Bid $b_{i,l}$

Bid evaluated

Rejected
 $b_{i,l} > \tau$

Accepted
 $b_{i,l} \leq \tau$

Buyer payoff: $x_i - b_{i,l} - (l+1) \kappa_i$
Seller payoff: $b_{i,l} - c$

Repeated bidding
